Webinar

Inspiration Station: Driving Change through Stakeholder Cooperation for Green Futures

In the second instalment of the 'Inspiration Station' series webinar, we will dive headfirst into stakeholder cooperation as the root for successful decarbonisation on the municipal level. Based on concrete examples from five countries in the Baltic Sea Region — Estonia, Finland, Latvia, Poland, and Sweden — we will demonstrate how fostering a shared responsibility towards the green transition and strong cooperation between public and private actors can shape outcomes to benefit all.

January 14, 2026

09:00 – 11:00 CET

Online

Register [here](#), the webinar is free of charge.

Target audiences

Municipality and regions, including urban and energy planners, associations, companies and industry, citizens and communities and energy companies

Agenda

9.00 The start of the webinar

EnergyNet: breaking barriers in local energy sharing in Brunnshög district in Lund, Sweden

Markus Paulsson, Energy Strategist and Project Manager at Lund Municipality, Sweden

Everything is connected: air quality improvement as a starting point for rapid energy transition in the project 'Podkarpacie – Live and Breathe'

Anna Lorynowicz, EU LIFE 'Podkarpacie - Live and Breathe' Project Manager, Poland

Developing intelligent energy communities in North Karelia, Finland: virtual energy communities, resource optimisation, and digital solutions

Kim Blomqvist, Project Manager at Karelia University of Applied Sciences, Finland

From idea to construction: the story of the development of the wind park in Kaigu swamp, Latvia

Sabīna Alta, Development Director at Laflora Ltd, Latvia

Why did the Estonian islands create an energy agency for transition and independence?

Taavi Liivandi, Consultant at Estonian Islands Energy Agency, Estonia

11.00 Closure, end of webinar

The webinar is organised within the Enercracy project, which equips municipalities with climate and energy plans to support the growth of energy communities and prosumers, while inspiring others to see how active engagement drives the green energy transition. [Read more:](#)
